ARE YOU KIDNEY ME?

ADVISER QUICK START / INDEPENDENT WEBSITE HANDOVER

Project team
Bill, Janez, Yesha, Aethan, Richelaine, Francine, Jochebid, Divine, Shakira

School _____

Adviser _____

Maintainer _____

1. Keep the project under your control

The agreed group or school should control the source repository and hosting account. Add the adviser as a repository collaborator for future updates. Public visitors need no ChatGPT login. A maintainer uses a GitHub account only to publish or manage the files.

2. Open the published website

kitkitskii.github.io/urine-trouble/
Published — GitHub deployment succeeded. GitHub Pages is configured to use **main / /(root)**. The repository is **github.com/kitkitskii/urine-trouble**. Open the dashboard for a game or Arcade Run. Retry and use hints while learning. Visitors need no account; the adviser can publish future updates through an agreed GitHub collaborator account.

3. Edit, export, then publish updates

1. Choose Edit Content and enter the instructor password. The editor relocks on exit or reload.

2. Update questions, answers, pictures, titles, points or learning notes.

3. Apply the changes and test them. Applying starts a fresh score session.

4. Choose Downloads, select website ZIP, enter the instructor password, and extract it.

5. Replace the repository's root files and commit the update.

6. Wait for Pages deployment, then test the public copy.

Important: browser drafts are local. Apply changes does not update the public website for other devices. Export and publish the changed files to share them.

4. Retain the independent backup

Keep the instructor password privately. Use Downloads with that password to create a CI transfer kit; retain its website ZIP, offline HTML, project JSON, guides, and maintainer details. Open **Urine_Trouble_Editable.html** in a full computer browser for offline play. Local-file saved progress depends on browser support.

What is included

Nine games, 68 urinary questions, 32 picture clues, 12 matching pairs in three rounds, six ordering puzzles, eight mistake checklists, eight sorting rounds, memory cards, word search, learning notes, flashcards, classroom scores and a teacher editor. The site uses plain HTML, CSS and JavaScript with embedded images; no backend or build command is required.

Instructor password

Editing and website downloads use the same instructor password. Each download check creates one copy, then relocks; score CSVs remain open. To change the password, use the current password and a new one of 12-128 characters, then publish the downloaded editor-access.js. The static/offline lock is not server authentication or encryption: public source/history can still be copied. Shared publication requires repository access.

Publication record

Repository: github.com/kitkitskii/urine-trouble
Public website: kitkitskii.github.io/urine-trouble/

See PUBLISHING.md for the prior deployment record. Prebuilt archives are not served as current public download files. The Render service URL remains unverified; no custom domain is recorded.
